Selected Work

We shape the strategy. Then we build it.

WEBSITES · CRM · LEAD GENERATION · AI AUTOMATION

We shape the strategy. Then we build it.

Prisma House is a London-based studio that builds custom CRMs, business systems and websites for growing companies, with the marketing strategy built in.

We build the websites, CRMs, lead generation and AI automations growing companies run on — one piece at a time or as one connected system — and we start every build from the strategy. The people who scope the work are the people who ship it.

Most companies buy a website from one supplier, a CRM from another and a few automation tools from a third, then hold it all together with spreadsheets. We design the whole thing as one system, and connect it with AI so work moves from first visit to paid invoice without anyone copying data between tools.

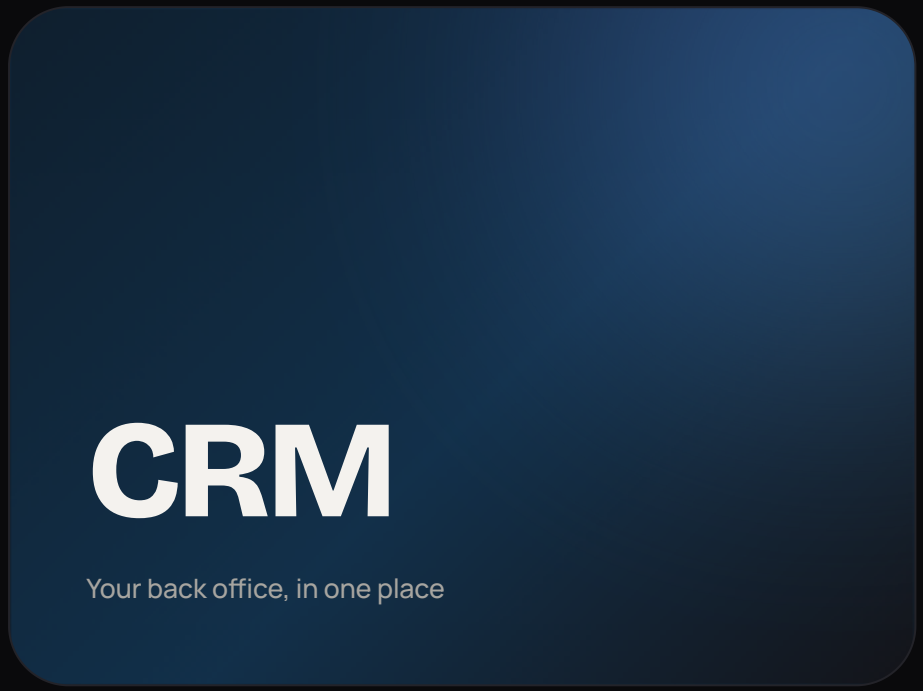

The projects that follow show real screens at their real scale, cropped to the part that matters. No invented numbers, no borrowed testimonials.

BUILD · DIGITAL INFRASTRUCTURE

- Connected Growth System
- Custom Systems & CRM
- Web Design & Development
- AI Automation & Agents
- Lead Generation Systems
- Strategy & Scoping Sprint

CONSULT · MARKETING & GROWTH

- Brand Strategy & Positioning
- Growth Marketing
- Content & Thought Leadership
- TV, Radio, Press & Podcast Pitching
- Marketing Audits & Advisory

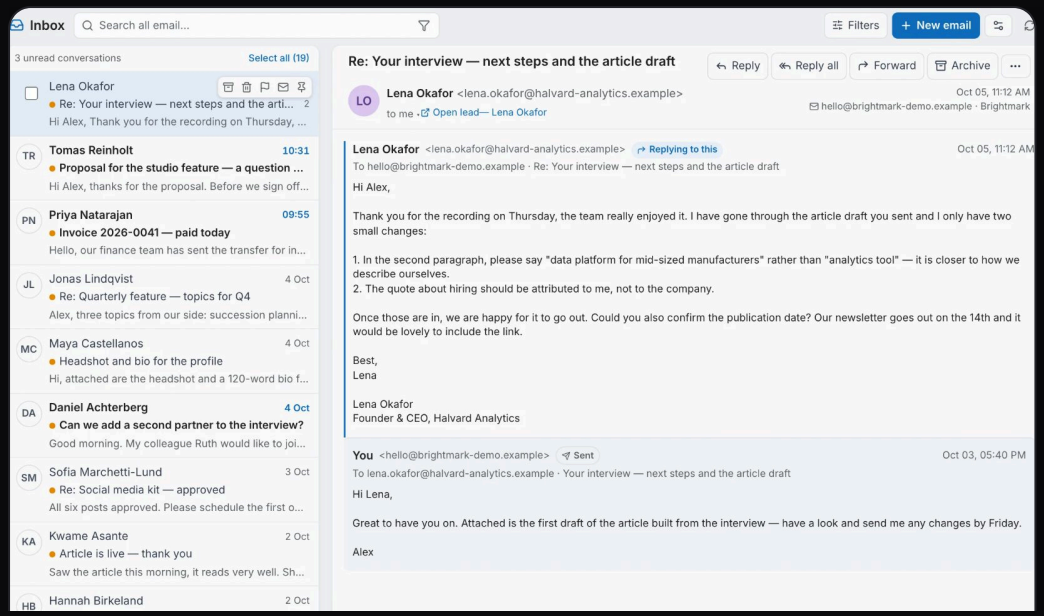

CRM

Your back office, in one place

Inbox, pipeline, follow-ups and invoices built around how your team works.

Pipeline · Invoicing · Email

The example on the next page: CRM & back office.

SYSTEM

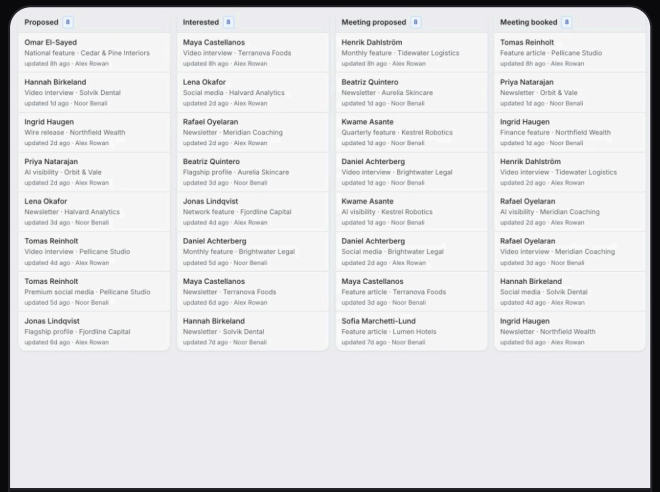

CRM & back office

One place for inbox, follow-ups, pipeline, campaigns and invoices.

Sales and client email lived across shared mailboxes, a generic CRM and spreadsheets; nobody had one view of a client from first reply to paid invoice.

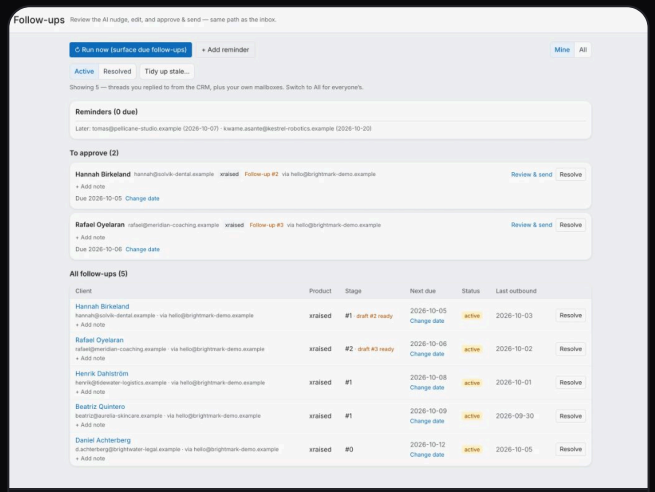

Shared inbox · Follow-up engine · Deal pipeline · Campaigns · Invoices

Built with Next.js · React · TypeScript · Tailwind CSS · PostgreSQL · TanStack Query · Recharts · Railway

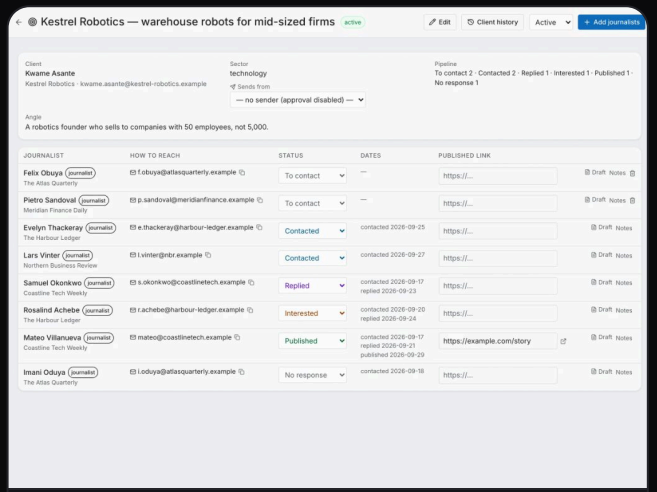

A pipeline the team can read at a glance

Deals move through named stages on a board or in a list. Each card carries the contact, the product and who owns it; a won deal becomes a delivery task.

Follow-ups that wait for a human

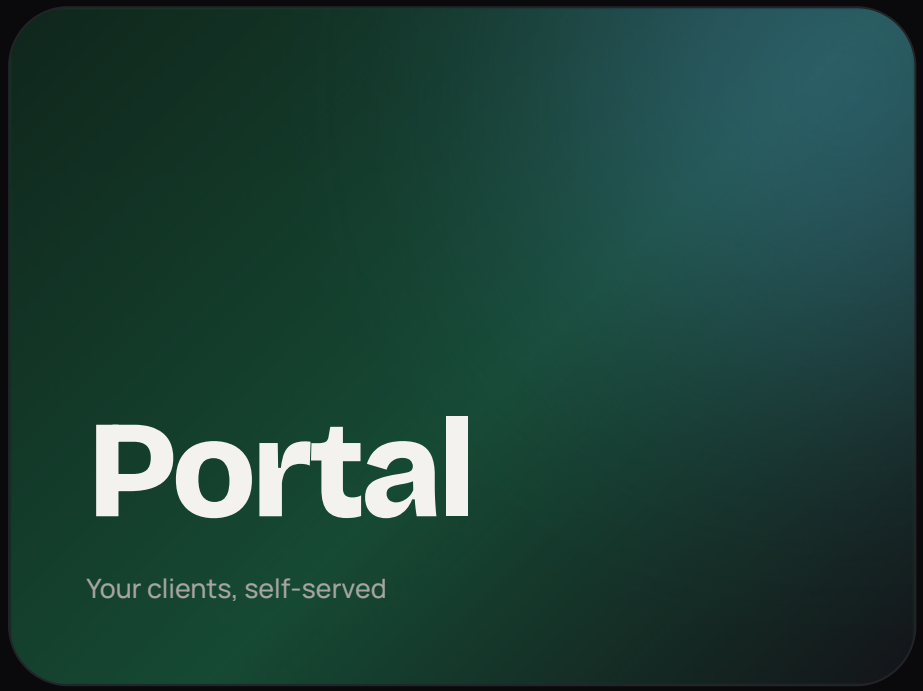

The engine notices when the client has not written back, drafts the next nudge and queues it for approval. Nothing is sent on its own.

Outreach campaigns, contact by contact

One campaign per client with the people to reach, the status of every message, the dates and the outcome when one lands.

Built on an existing in-house CRM codebase and heavily tailored for Xraised. Every screen is shown with fictional demo data: the people, companies, outlets and amounts are invented.

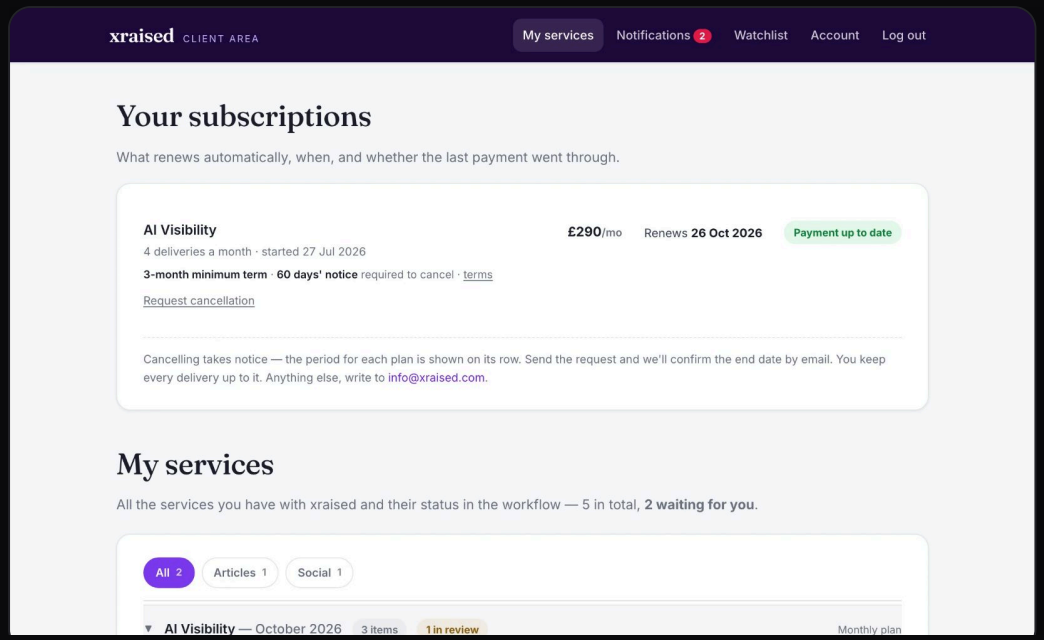

PORTAL

Your clients, self-served

A private area where your clients track progress, approve work, download files and pay.

Client login · Approvals · Payments

The example on the next page: Client portal.

SYSTEM

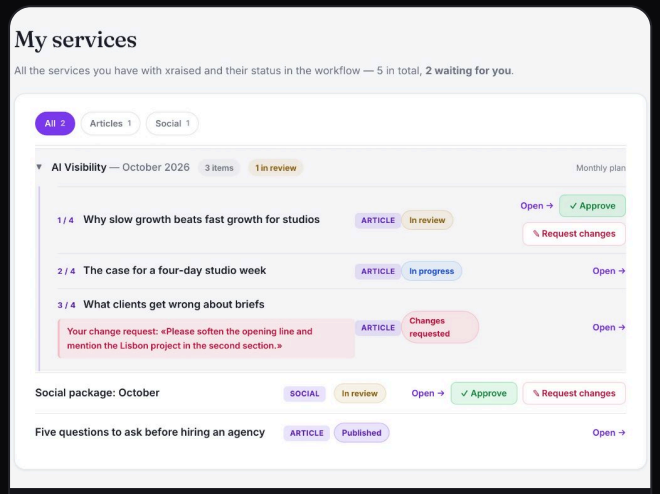

Client portal

A private area where clients follow their work, approve it, download files and pay.

Clients kept asking by email where their work stood, what needed approving and where the files were; the answers lived in the team's inboxes.

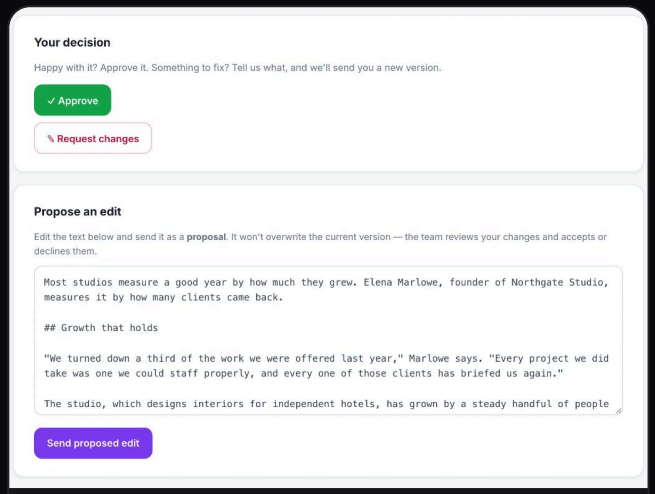

Client login · Progress tracking · Approvals · Downloads · Payments

Built with Python · FastAPI · PostgreSQL · Next.js · TypeScript · Railway

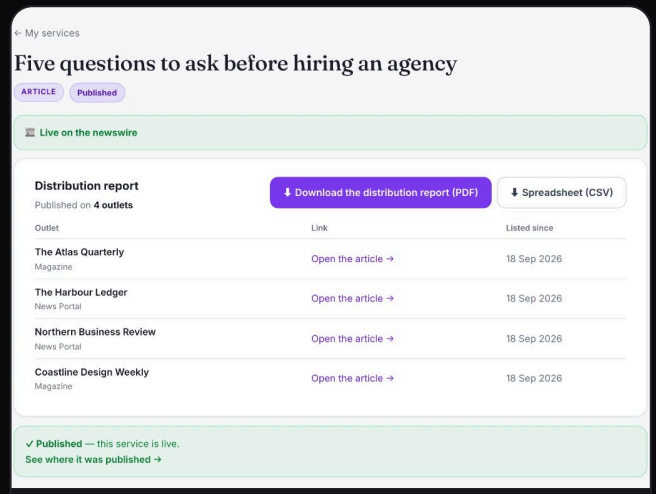

Every client sees where their work stands

Each piece of work moves through named stages. The client follows it from their own page, without writing an email to ask.

Approve or ask for changes in one click

Drafts are reviewed inside the portal, with comments and proposed edits kept next to the work they refer to.

Files and receipts in one place

Deliverables, reports and invoices are downloaded from the portal instead of being hunted down in old emails.

Screens from a local copy with fictional demo data: the client, the company, the outlets and the titles are invented.

Website

Sites that sell

WEBSITE

Sites that sell

Marketing sites and stores, designed and built in-house.

Design · Copy · Online checkout

The examples on the next pages: Multilingual site with a product catalogue · Content website with lead generation.

WHAT WE DO

Everything between your expertise and a finished book.

Writing a book is hard, slow and easy to abandon. We remove every step that stops busy leaders from finishing — and do it for you.

We write it

You're matched with a dedicated, native-English writer from our team of ghostwriters. A simple questionnaire and a few conversations are all it takes — they handle the manuscript, with unlimited proofreading until it's right.

We design it

A custom cover, interior layout and eBook formatting, crafted to sit comfortably next to the best books in your category — and to look the part on every screen and shelf.

WEBSITE

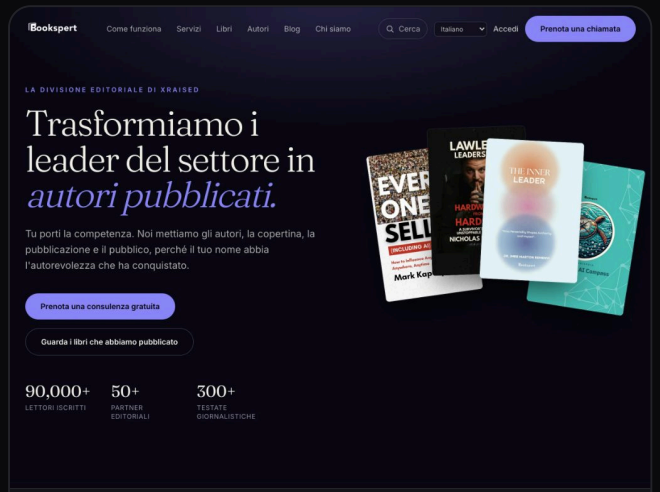

Multilingual site with a product catalogue

A six-language website with a catalogue, a customer dashboard and a sales back office.

A considered, high-ticket service had to be explained in six languages, turn visitors into booked consultations and give customers and the sales team a place to work after the sale.

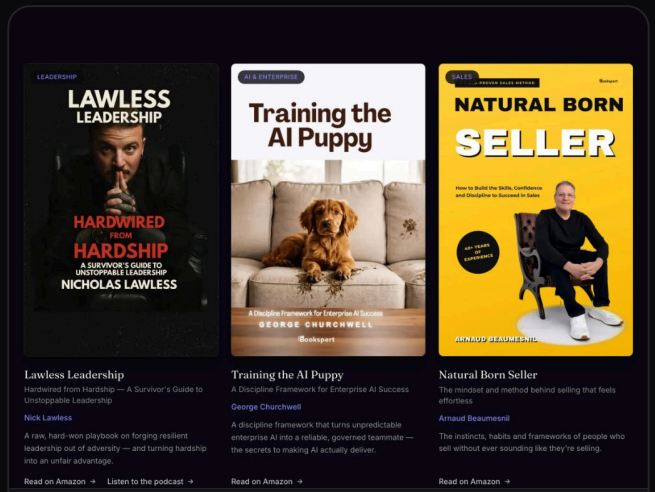

Six languages · Product catalogue · Customer dashboard · Sales back office

Built with Next.js · React · TypeScript · Tailwind CSS · Supabase · PostgreSQL · Vercel

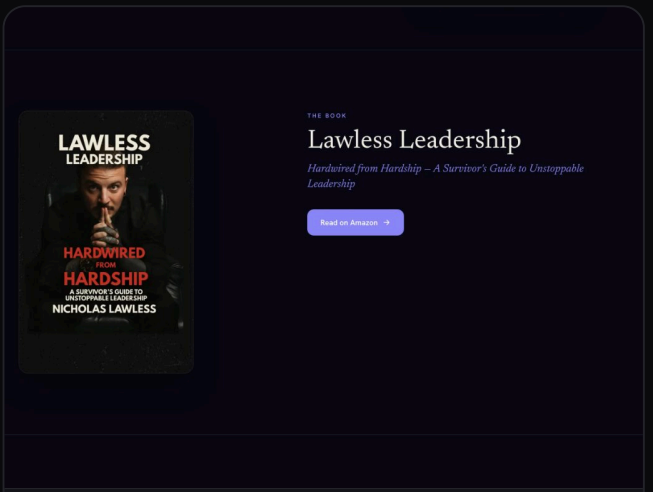

Six languages from one codebase

The language comes from a cookie or the browser and can be switched in the header; every page, form and email exists in all six, with a currency switcher alongside.

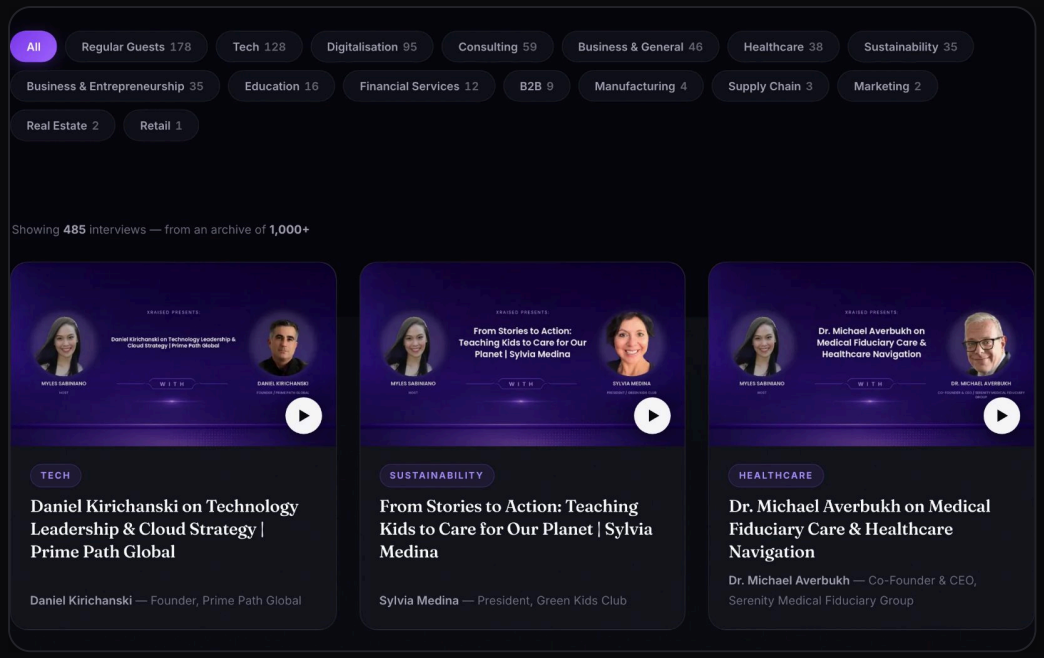

A catalogue search engines understand

Every product has its cover, description and buying link, with structured data so it is found as a product, not just as a page.

A page for every person and product

Profiles merge built-in data with what each person edits from their own account; every product gets its own section and buying link.

WEBSITE

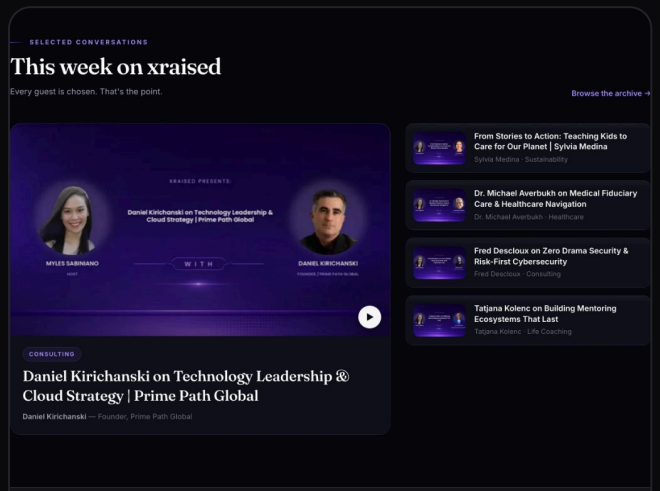

Content website with lead generation

A content library, lead-generation tools and online checkout behind one website.

A service brand needed one website that sells its offer, qualifies leads on its own and keeps a large content library in order.

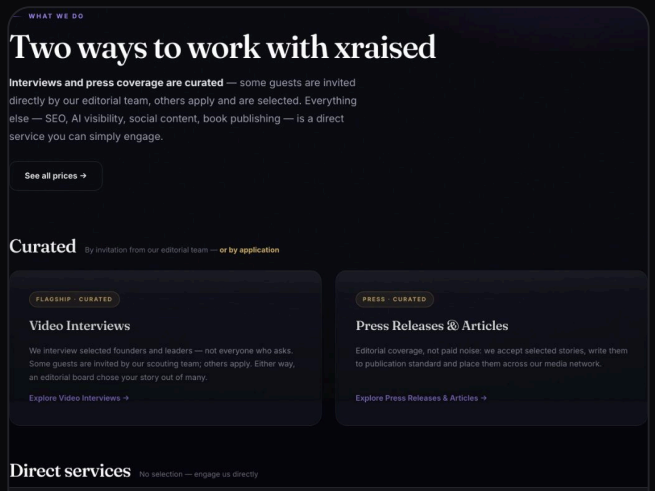

Lead-generation tools · Content library · Online checkout · Client portal

Built with Python · FastAPI · Jinja2 · PostgreSQL · SQLAlchemy · APScheduler · Playwright · ffmpeg · Railway · Cloudflare

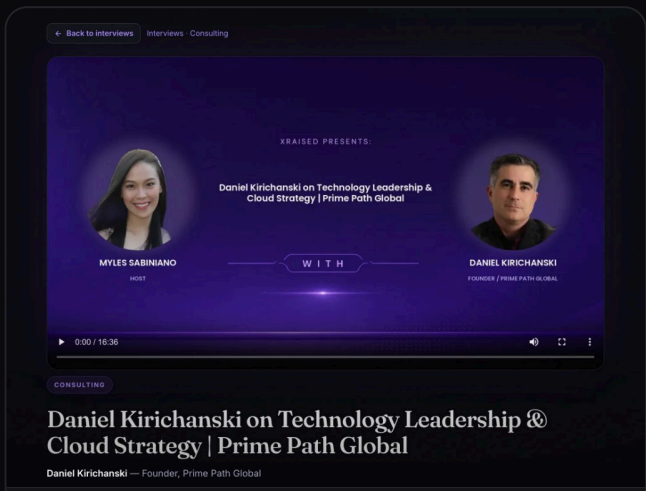

A content library that updates itself

Every piece has its own page with the media, the people and a category. The home page surfaces the latest ones automatically.

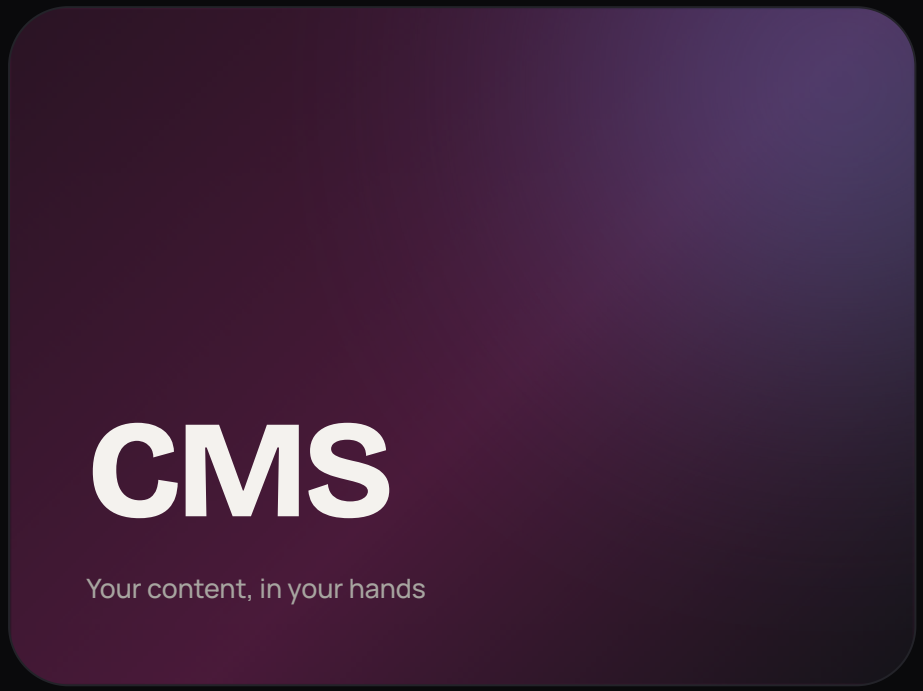

Services, prices and checkout

Every service on one page, each with its own detail page, a price list and card checkout in more than one currency.

One page per item, built for search

Media, category and title, followed by a written piece that search engines and AI assistants can read.

CMS

Your content, in your hands

A back office where your team updates pages, products and posts without calling a developer.

Content editor · Scheduling · Multi-channel

The example on the next page: Content management system.

SYSTEM

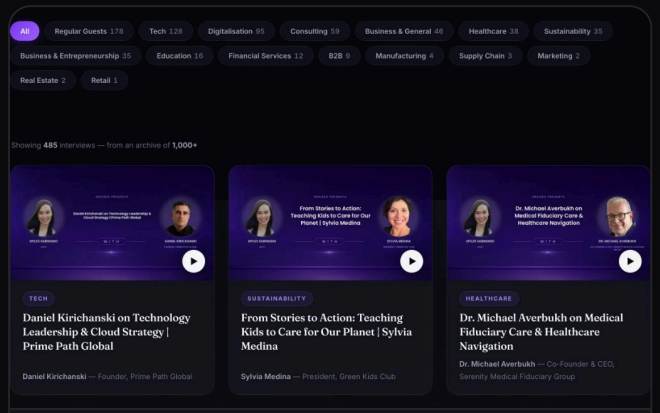

Content management system

One system from raw material to a published page, a schedule and social posts.

Hundreds of pieces of content a year had to become pages, listings and posts on a schedule, with a small team and no copy-paste between tools.

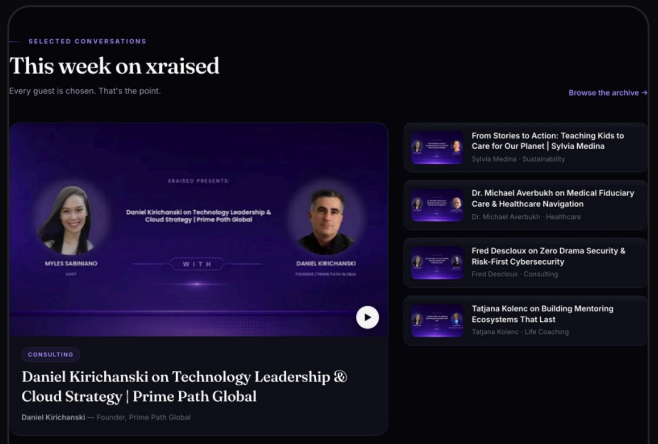

Content editor · Publishing schedule · Approval flow · Multi-channel output

Built with Python · FastAPI · Jinja2 · PostgreSQL · SQLAlchemy · Playwright · ffmpeg · Railway

A page for every item, generated

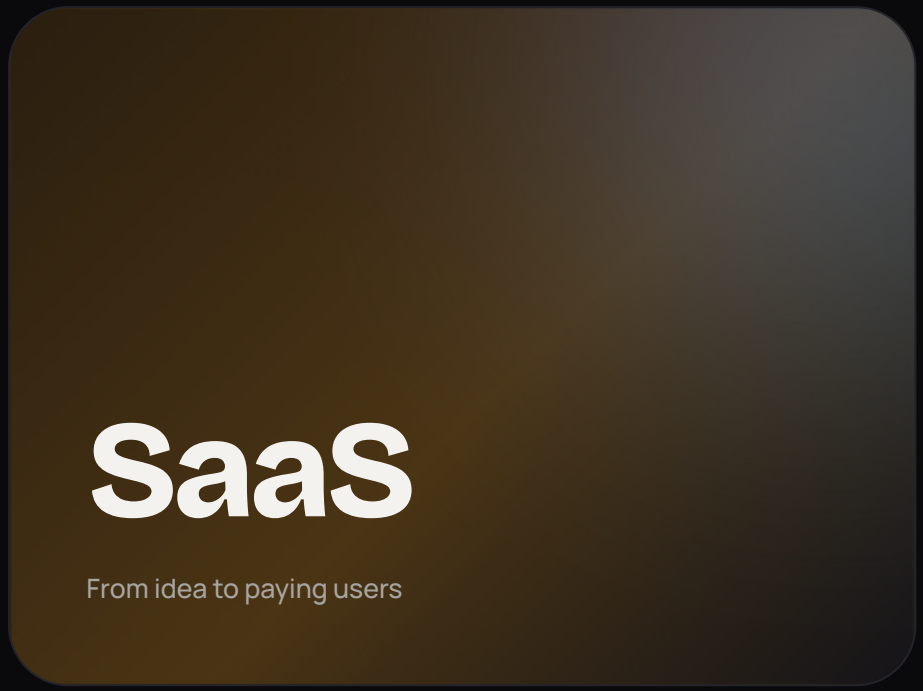

The CMS holds the media, the people, the cover and the text; publishing builds the public page, the category listings and the feeds.

A schedule that keeps the site fresh

A rolling plan decides what goes out and when; the home page and the feeds update on their own.

Every page here is generated and scheduled by the CMS, not written by hand.

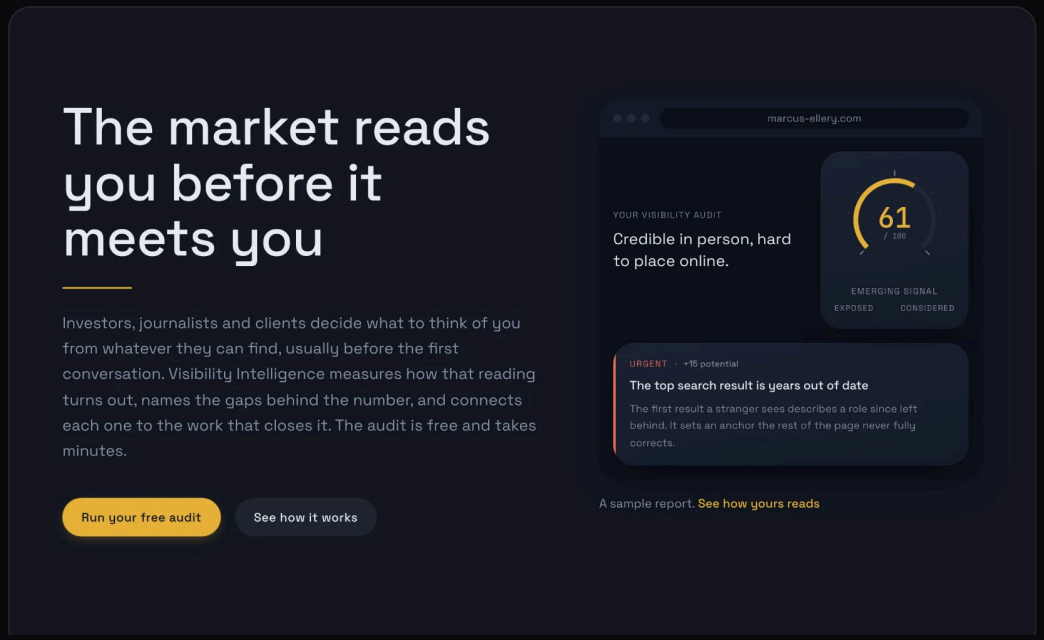

SAAS

From idea to paying users

Products with accounts, subscriptions and a client area.

Subscriptions | Client area | AI engine

The example on the next page: Subscription product with an AI engine.

SAAS

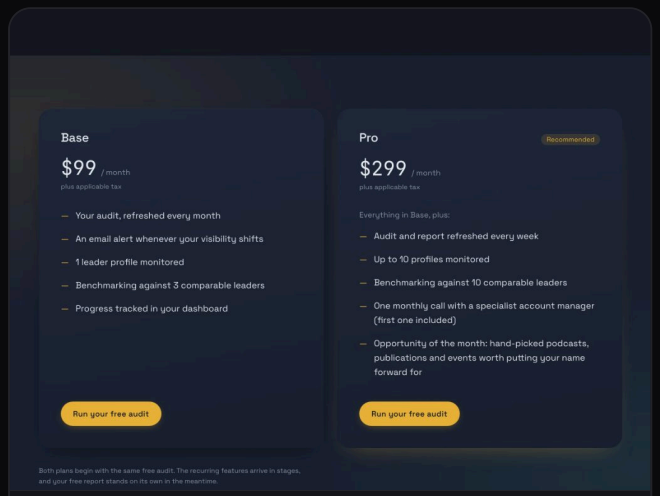

Subscription product with an AI engine

A free AI-powered report, paid plans and a client area.

An idea for a paid online service had to become a product people can try for free, understand at a glance and subscribe to.

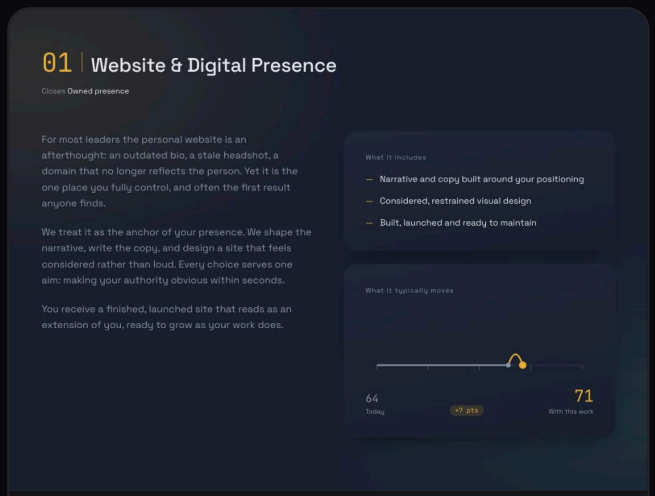

AI engine · Report PDF · Subscriptions with Stripe · Client area · Services marketplace

Built with Next.js · React · TypeScript · Tailwind CSS · PostgreSQL · Railway

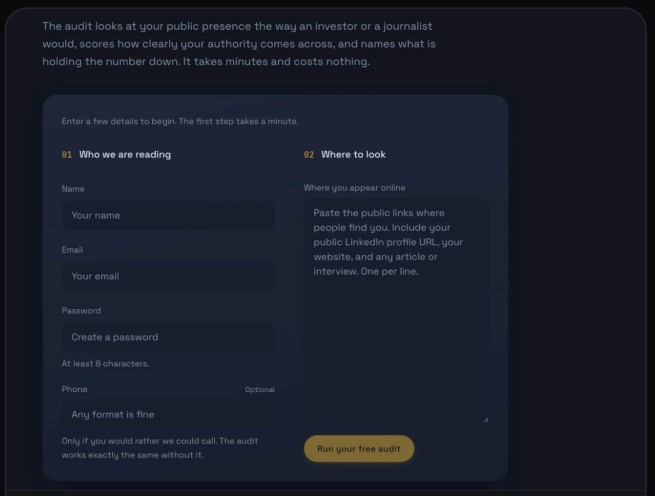

Subscription plans with online billing

Two plans with card checkout, automatic tax and a self-service billing portal; the plan decides what each customer can access.

Add-on services, sold inside the product

Each result is matched to a paid service with its deliverables and timeline, requested in one click.

A free trial that starts with one form

A short form is all it takes. The engine does the research and returns a structured report in minutes.

The report preview and the case studies are the product's own illustrative examples with invented people and companies.

AI Agents

Systems that do the work

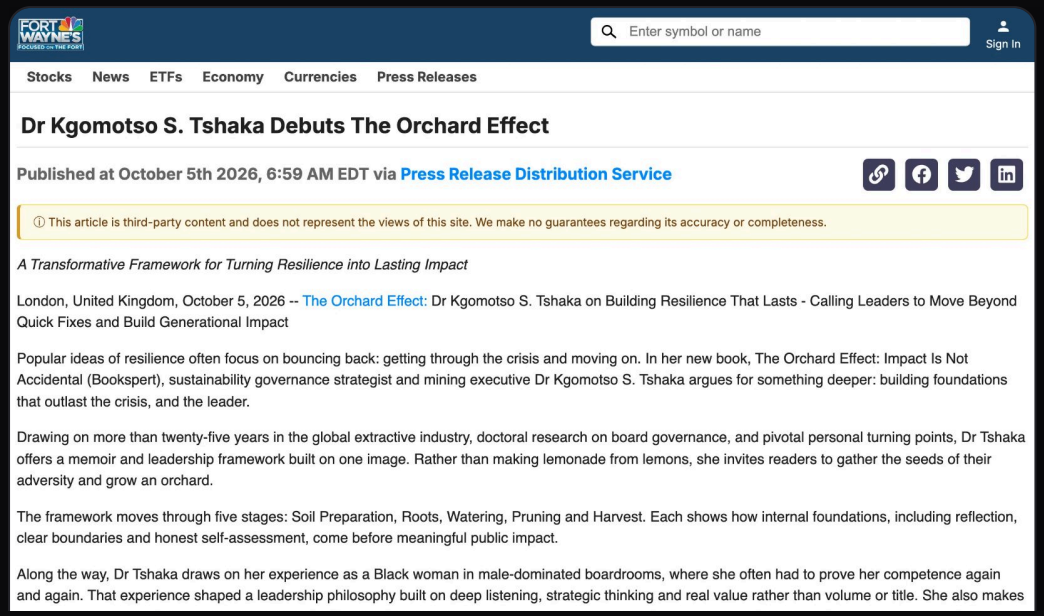

AI AGENTS

Systems that do the work

Agents that take on repetitive work, from drafting to follow-ups, inside your own tools.

Drafting · Automation · Follow-ups

The example on the next page: AI agents in daily operations.

AI AGENTS

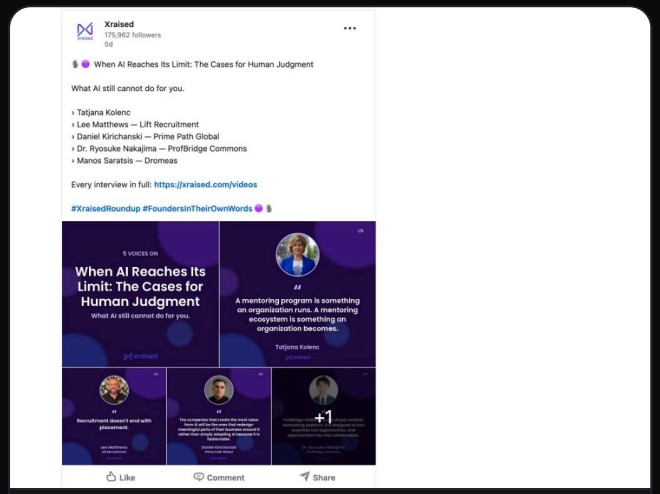

AI agents in daily operations

Agents that write, distribute, prepare the posts and chase the reply.

Every new piece of work triggered the same chain of tasks: write it up, send it out, prepare the posts, chase the reply. Done by hand, that chain set the ceiling on how much could ship.

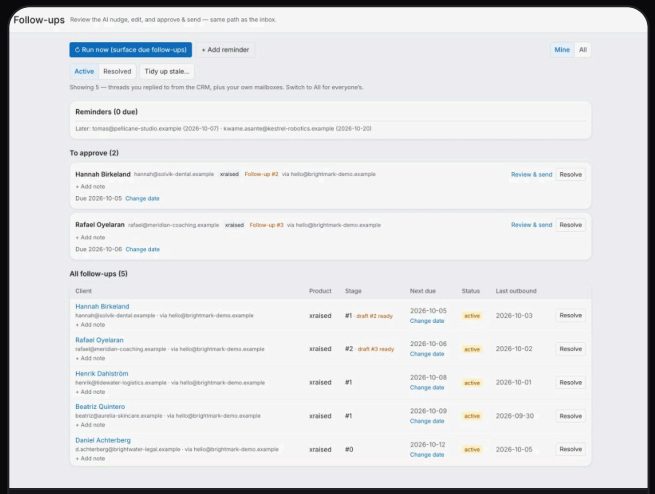

Writing agent · Distribution · Social posts · Follow-ups

Built with Python · FastAPI · PostgreSQL · APScheduler · Playwright · ffmpeg · Next.js · Railway

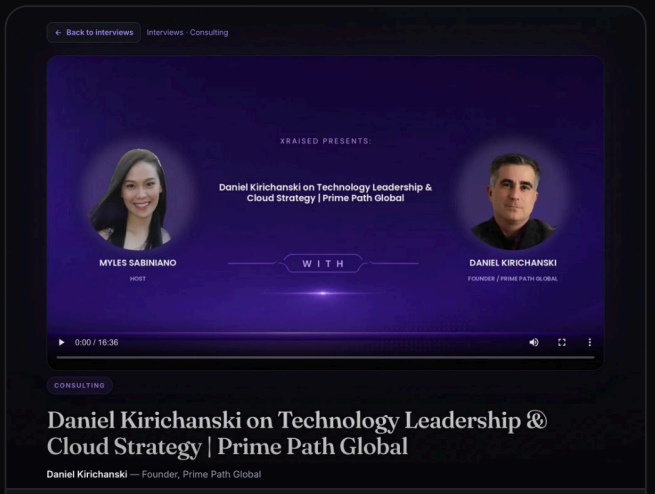

Social posts, generated and published

Slides, captions and short videos come out of the same source and go out on their channel on schedule.

Follow-ups that wait for a human

In the CRM, an agent notices when the client has not written back, drafts the next nudge and queues it for approval. Nothing is sent on its own.

One input, everything else derived

A single source, here a recorded conversation, is the only input; the write-up, the distribution and the posts are derived from it.

One input in; write-up, distribution, social posts and follow-ups out. No one touches it in between.
